HKS Medical Information Systems Enters Bone Marrow Transplant Market

Signs contract with Barnes-Jewish Hospital, Siteman Cancer Center

Omaha, March 20, 2009: HKS Medical Information Systems was awarded a contract this week with the Siteman Cancer Center at Barnes-Jewish Hospital and Washington University School of Medicine to develop a software system to support their bone marrow transplant program. Barnes-Jewish/St. Louis Children's Hospital is one of the nation's largest transplant centers. Siteman Cancer Center is Missouri's only NCI-designated Comprehensive Cancer Center.

This contract marks HKS's entrée into the rapidly growing Bone Marrow transplant market. This market recently topped 1 million transplants in a year. HKS President/CEO Mary Cockerill believes this market will help sustain and further fuel the corporate growth HKS has experienced in the past few years. "The credibility and market notoriety we have in solid organ transplantation will help propel our product success in Bone Marrow Transplantation. It's a natural extension of our products and services. The introduction of our Bone Marrow module was extremely well received at the BMT Tandem Meetings in Tampa, FL, in February of this year. 2009 will be an exciting year for us." says Cockerill.

HKS Medical Information Systems, celebrating over 15 years in business, is an Omaha, Nebraska based company. HKS has maintained its position as the market leader in solid organ transplant software. The flagship product, "OTTR" (Organ Transplant Tracking Record", is used in 69 major hospitals throughout the United States and Canada. In 2007, HKS was named to Inc. Magazine's list of 5000 fastest growing private companies.
